

IASSN Statement on the Use of the Artificial Intelligence

Parent/carers, children and young people have the right to access information, advice and support where they choose, including the use of artificial intelligence tools. However, IASSN's position is that artificial intelligence does not provide an accurate or reliable source of information and guidance on the law. The risk of incorrect or misleading legal information being provided to parent/carers, children and young people who make use of such tools is high.

The High Court of Justice has issued a [regulatory warning](#) in 2025 against the misuse of artificial intelligence in legal cases:

"Freely available generative artificial intelligence tools, trained on a large language model such as ChatGPT are not capable of conducting reliable legal research. Such tools can produce apparently coherent and plausible responses to prompts, but those coherent and plausible responses may turn out to be entirely incorrect. The responses may make confident assertions that are simply untrue. They may cite sources that do not exist. They may purport to quote passages from a genuine source that do not appear in that source."¹

Please remember, parent/carers, children and young people have a right to access free and impartial information, advice and support from trained, SEND specialists via their local SENDIAS service. They find details of their local service on the [Council for Disabled Children website](#).
